			ART UNIT 2618	PAPER NUMBER
			MAIL DATE 11/15/2007	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/771,547

Applicant(s)

AMEIGEIRAS ET AL.

Examiner

Eugene Yun

Art Unit

2618

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 16 August 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 05 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nevo et al. (US 6,813,256) in view of Wei et al. (US 6,987,780).

Referring to Claim 1, Nevo teaches a method of sending packet data units for unacknowledged mode services in a handover between base stations in a mobile communications network, wherein the network comprises a network node connected to at least a first base station and a second base station (see 36 in fig. 2), and user equipment connected to at least one of said first and second base stations (see col. 6, lines 32-40), the method comprising:

transmitting packet data units in an acknowledged mode radio link control entity between a transmitting side and a receiving side (see col. 12, lines 5-15);

setting a retransmission parameter so that the packet data units are not retransmitted to said first base station when receiving status reports for sent packet data units from said receiving side (see col. 9, lines 8-22);

buffering transmitted packet data units in a retransmission buffer (see col. 12, lines 23-30);

receiving status reports for the sent packet data units from said receiving side (see col. 12, lines 47-61).

Nevo does not teach:

purging the packet data units from said retransmission buffer based on said received status reports; and

scheduling remaining packet data units in said retransmission buffer for transmission to said second base station, and transmitting said scheduled remaining packet data units to said second base station.

Wei teaches:

purging the packet data units from said retransmission buffer based on said received status reports (see col. 16, lines 39-45); and

scheduling remaining packet data units in said retransmission buffer for transmission to said second base station, and transmitting said scheduled remaining packet data units to said second base station (see col. 16, lines 31-38).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teachings of Wei to said device of Nevo in order to better prevent loss of data due to long periods between retransmissions.

Referring to Claim 5, Nevo teaches a system of sending packet data units for unacknowledged mode services in a handover between base stations in a mobile communications network, the system comprising:

a network node connected to at least a first base station and a second base station (see 36 in fig. 2);

user equipment connected to at least one of said first and second base stations (see col. 6, lines 32-40);

a transmitter configured to transmit packet data units in an acknowledged mode radio link control entity between a transmitting side and a receiving side (see col. 12, lines 5-15);

a retransmission buffer for buffering transmitted packet data units (see col. 9, lines 8-22);

a setting unit configured to set a retransmission parameter so that the packet data units are not retransmitted to said first base station when receiving status reports for sent packet data units from said receiving side (see col. 12, lines 23-30);

a receiver configured to receive the status reports for the sent packet data units from said receiving side (see col. 12, lines 47-61).

Nevo does not teach:

a management unit configured to purge the packet data units from said retransmission buffer based on said received status reports; and to schedule remaining packet data units in said retransmission buffer for transmission to said second base station,

wherein said transmitter is configured to transmit said scheduled remaining packet data units to said second base station.

Wei teaches:

a management unit configured to purge the packet data units from said retransmission buffer based on said received status reports (see col. 16, lines 39-45);

and to schedule remaining packet data units in said retransmission buffer for transmission to said second base station,

wherein said transmitter is configured to transmit said scheduled remaining packet data units to said second base station (see col. 16, lines 31-38).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teachings of Wei to said device of Nevo in order to better prevent loss of data due to long periods between retransmissions.

Referring to Claim 9, Nevo teaches an acknowledged mode transmitting side protocol entity for sending packet data units for unacknowledged mode services in a handover between base stations in a mobile communications network (see ABSTRACT and fig. 2), the system comprising:

a transmitter configured to transmit packet data units in an acknowledged mode radio link control entity between a transmitting side and a receiving side (see col. 12, lines 5-15);

a retransmission buffer for buffering transmitted packet data units (see col. 9, lines 8-22);

a setting unit configured to set a retransmission parameter so that the packet data units are not retransmitted to said first base station when receiving status reports for sent packet data units from said receiving side (see col. 12, lines 23-30);

a receiver configured to receive the status reports for the sent packet data units from said receiving side (see col. 12, lines 47-61).

Nevo does not teach:

a management unit configured to purge the packet data units from said retransmission buffer based on said received status reports; and to schedule remaining packet data units in said retransmission buffer for transmission to said second base station,

wherein said transmitter is configured to transmit said scheduled remaining packet data units to said second base station.

Wei teaches:

a management unit configured to purge the packet data units from said retransmission buffer based on said received status reports (see col. 16, lines 39-45); and to schedule remaining packet data units in said retransmission buffer for transmission to said second base station,

wherein said transmitter is configured to transmit said scheduled remaining packet data units to said second base station (see col. 16, lines 31-38).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teachings of Wei to said device of Nevo in order to better prevent loss of data due to long periods between retransmissions.

Referring to Claim 13, Nevo teaches a system for sending packet data units for unacknowledged mode services in a handover between base stations in a mobile communications network, wherein the network comprises a network node connected to at least a first base station and a second base station (see 36 in fig. 2), and user equipment connected to at least one of said first and second base stations (see col. 6, lines 32-40); the system comprising:

Transmitting means for transmitting packet data units in an acknowledged mode radio link control entity between a transmitting side and a receiving side (see col. 12, lines 5-15);

setting means for setting a retransmission parameter so that the packet data units are not retransmitted to said first base station when receiving status reports for sent packet data units from said receiving side (see col. 9, lines 8-22);

buffering means for buffering transmitted packet data units in a retransmission buffer (see col. 12, lines 23-30);

receiving means for receiving the status reports for the sent packet data units from said receiving side (see col. 12, lines 47-61).

Nevo does not teach:

purging means for purging the packet data units from said retransmission buffer based on said received status reports;

scheduling means for scheduling remaining packet data units in said retransmission buffer for transmission to said second base station, and transmitting means for transmitting said scheduled remaining packet data units to said second base station.

Wei teaches:

Purging means for purging the packet data units from said retransmission buffer based on said received status reports (see col. 16, lines 39-45); and

Scheduling means for scheduling remaining packet data units in said retransmission buffer for transmission to said second base station, and transmitting

means for transmitting said scheduled remaining packet data units to said second base station (see col. 16, lines 31-38).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teachings of Wei to said device of Nevo in order to better prevent loss of data due to long periods between retransmissions.

Referring to Claims 2, 6, and 10, Wei also teaches purging the packet data units that have been either negatively or positively acknowledged by said user terminal from said retransmission buffer (see col. 16, lines 39-45).

Referring to Claims 3, 7, and 11, Nevo also teaches setting a retransmission parameter that comprises a MaxDAT with an appropriate value (see col. 13, lines 58-67).

Referring to Claims 4, 8, and 12, Nevo also teaches transmitting the packet data in said mobile communication network, which is a high speed downlink packet access network (see col. 2, lines 42-47).

Response to Arguments

3. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Application/Control Number:
10/771,547
Art Unit: 2618
